PROFESSIONAL SUMMARY

Software Engineer with 1+ year of experience deploying cloud-native, AI-powered applications on AWS and Azure. Proven expertise in serverless architecture (AWS Lambda, Azure Functions), RESTful API development, cost optimization, and multi-cloud governance. Hands-on experience with CI/CD pipelines, Infrastructure as Code, and Agile development practices. Skilled in React, TypeScript, Python, and building full-stack distributed systems at production scale.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Bash

Frontend: React.js, TypeScript, Tailwind CSS, Context API, REST API Integration, Responsive Design

Backend: Node.js, REST APIs, Serverless Architecture, Microservices, ASP.NET Core Web API

Cloud Platforms: AWS (Lambda, API Gateway, S3, EC2, IAM, CloudWatch, Cost Explorer, Bedrock, DynamoDB, Cognito, STS), Azure (Functions, Cosmos DB, OpenAI, Active Directory, App Service, Blob Storage)

AI / ML: Amazon Bedrock, Azure OpenAI (GPT-4o-mini), LLM Integration, Prompt Engineering, AI Workflow Automation

Databases: DynamoDB, Cosmos DB, SQL Server, MongoDB, MySQL

DevOps & Tools: Git, GitHub, Postman, VS Code, CI/CD, Infrastructure as Code, Agile/Scrum

Security: IAM Policy Management, RBAC, OAuth 2.0, SSO (Cognito, Azure AD), JWT, CORS

WORK EXPERIENCE

Software Engineer – Quadrant Technologies

December 2024 – Present

- Architected a scalable multi-cloud governance platform integrating AWS, Azure, and GCP, enabling centralized access control, RBAC enforcement, and unified cost visibility across 3 cloud environments for enterprise users.
- Launched AI-driven cost optimization workflows using Amazon Bedrock (Llama 3) and Azure OpenAI (GPT-4o-mini), delivering real-time infrastructure recommendations that reduced manual review time by over 40%.
- Engineered serverless backend systems using AWS Lambda (Python) and Azure Functions (Python) across 6+ microservices, processing infrastructure provisioning requests within a 15-minute SLA.
- Cut cloud API overhead by ~30% by introducing intelligent caching with DynamoDB and Cosmos DB (24-hour TTL), directly improving dashboard load times for 50+ enterprise users.
- Established secure SSO authentication using AWS Cognito (Authorization Code flow) and Azure Active Directory, supporting 3 enterprise user roles with OAuth 2.0 and JWT token lifecycle management.
- Integrated AWS Cost Explorer and Pricing APIs to surface real-time cost forecasts and service-level spending breakdowns across 10+ AWS services, enabling data-driven cloud budgeting.
- Developed RESTful APIs via API Gateway (v1/v2) with CORS hardening, STS role assumption, and IAM pre-checks, securing access to cloud resources across multiple AWS accounts.
- Collaborated in Agile/Scrum sprints with 2-week cycles, conducting code reviews and maintaining CI/CD workflows using Git and GitHub across a 4-person engineering team.

PROJECTS

UC3 – Multi-Cloud Governance & Cost Optimization Platform

January 2026 – Present

- Delivered a full-stack AI-powered cost optimization engine with React/TypeScript frontend and AWS Lambda/Azure Functions backend, processing real-time cloud usage data across 2 providers to generate resource-level saving plans.
- Architected a distributed caching layer using DynamoDB and Azure Cosmos DB with 24-hour TTL, eliminating 80%+ of redundant AI API calls and cutting average response latency by over 50%.

- Streamlined multi-cloud cost analysis by integrating AWS Cost Explorer and Azure Cost Management APIs, enabling unified cost-by-service and cost-by-region reporting across a single dashboard.
- Orchestrated an end-to-end access request lifecycle covering approval workflows, automated provisioning, and audit tracking across AWS and Azure, reducing manual ops effort by ~35%.
- Diagnosed and resolved a DynamoDB Decimal serialization bug and authored AZ-to-region mapping logic, normalizing data formats across 15+ AWS and Azure resource types.

QAssessment – Cloud-Based Assessment Platform

March 2025 – July 2025

- Configured authentication and role-based authorization (RBAC) for 3 distinct user roles — Admin, Manager, and User — using ASP.NET Core Web API and Azure Active Directory, securing access for 200+ users.
- Deployed a full-stack application on Azure App Service with REST API integration, scalable architecture, and CI/CD pipeline, achieving consistent sub-2-second page load times.
- Developed performance-optimized analytics dashboards in React, reducing assessment data retrieval time by 60% through query optimization and client-side caching.

Healthcare Solution Platform

August 2025 – December 2025

- Shipped a multilingual, mobile-first healthcare application in React supporting 3 languages (English, Telugu, Hindi) via cloud-based translation APIs, expanding accessibility for 10,000+ potential users.
- Automated appointment booking workflows with real-time availability checks, cutting average booking time from 5 minutes to under 60 seconds.

EDUCATION

Bachelor of Technology in Computer Science Engineering

Graduated April 2024

8.64 GPA

Vasireddy Venkatadri Institute of Technology, Andhra Pradesh

Relevant coursework:

CERTIFICATIONS

Microsoft Certified: Azure Developer Associate (AZ-204)

Valid until March 2027

Google Cloud Certified – Cloud Digital Leader

Valid until February 2027

AWS Academy Graduate – Cloud Foundations**AWS Academy Graduate – Machine Learning Foundations**

ACHIEVEMENTS

LeetCode 100-Day Streak

2023 – 2024

Solved 100+ algorithmic problems across data structures, graph algorithms, and dynamic programming, placing in the top 25% of active users on the platform

LANGUAGES

Proficient: English, Telugu**Intermediate:** Hindi
